

IG_charging_peak <4A
IG_discharging_peak <8A

->Max currents:
 $IG_{\text{charging}} = 12V - 3.3V / (47 + 0.42 + 1.73)\Omega = 177mA$
 $IG_{\text{discharging}} = 4.6V - 0.5V / (12 + 0.18 + 1.73)\Omega = 294mA$

Datasheet said minimum
20x CISS for
output-caps:
 $2 \times 100\text{nF} > 20 \times 2.5\text{nF}$
