

R_SENSE1 (R31 / Not found) = 105k
R_SENSE2 (R32 / Not found) = 280k is Gain
->I4 ->Leads to:
1.11V@105°C
2.00V@20°C

VTEMP has voltage divider with 20k/10k:
MOD input voltages->
 $1.11V * 10 / (10 + 20) = 0.37V @ 105^{\circ}C$
 $2.00V * 10 / (10 + 20) = 0.67V @ 20^{\circ}C$
MOD input should be between 0.14V and 0.9V
